

Xinxin Ma

Associate Professor, Department of Comparative and World Economics,
Institute of Economic Research, Hitotsubashi University

Specialization:

Chinese Economy, Labor Economics, Development Economics
maxx@ire.hit-u.ac.jp

Education

- 1991.7 B. A. Medical Department Chinese Medical University
- 2003.3 M.A. (Commercial Science) Tokyo International
University
- 2009.2 Graduated from the Graduate School of Commerce
Science, Keio University
- 2009.2 Ph.D. (Commercial Science) Keio University

Position Held

- 2004.4 Research fellow, Keio Advanced Research Centers
(KARC), Keio University,
- 2006.12 Research fellow, Policy Research Institute(PRI),
Ministry of Finance, Japan
- 2008.4 Associate Research Fellow, Keio Economic Observatory
(KEO), Keio University
- 2012.4 Assistant Professor, Health Economic and Pharmaceutical

- Policy Division, Graduate School of Pharmaceutical Sciences,
Kyoto University
- 2013.10 Senior Lecturer, Health Economic and Pharmaceutical
Policy Division, Graduate School of Pharmaceutical Sciences,
Kyoto University
- 2015.10 Associate Professor, Institute of Economic Research,
Hitotsubashi University

Previous Research

My mainly research issues are empirical studies on Chinese economy, particularly economic transition and the changes of labor market structure in China. I participated in international research projects of China, Japan, and Korean organized by the Policy Research Institute (PRI), Ministry of Finance Japan in 2006-2008. Using Chinese micro-survey data, I did joint researches with Income Distribution Research School of Beijing Normal University, Population and Labor Economic Research Institute Chinese Academy of Social Sciences, and the State Council Development Research Center, focusing on the issues such as wage differentials in China, migration and segmentation of labor market in China, and Lewis's turning point in Chinese economy. After 2012, I am attending the Health, Labor and Welfare Grant-in-Aid for Scientific Research Project conducted by National Institute of Population and Social Security Research and taking the empirical studies on the effect of the reform of public health insurance on household consumption and the utilization of health care, income inequality and health inequality.

In additions, I participated the research projects of Keio Household Panel Survey (KHPS) and Japanese Household Panel Survey (JHPS) in 2004-2012. Using these panel data, I tried to investigate the mechanism of household consumption behavior, and the determinants of labor participation and time allocations in the household. From 2006 until now, I are participating the research projects organized by the Japan Institute of labor Policy and Training (JILPT) for Ministry of Health, Labor and Welfare, Japan. Using the government national statistics data and original survey data conducted by JILPT, I am trying to clarify the determinants of the female and the elderly labor participation and give the policy implications to promote the labor participation in order to deal with the

population decrease problems in Japan.

Current research projects

My current researches focus on the following empirical studies:

- (1) The effect of minimum wage on employment and wage distribution in China
- (2) The public health insurance system reform and its impact on health care service utilization in China
- (3) Rural-urban migrants and disparities of participation in social security system
- (4) Economic system transition and the determinants of self-employment in China
- (5) Income inequality between migrants and local urban residents in urban China
- (6) Labor policy research projects on promoting the single mother, the elderly labor participation, and irregular worker employment policy in Japan

(1) is a continuation work supported by JSPS KAKENHI Grant (Grant-in-Aid for Scientific Research(C)) for three years. (2) is new project started in April 2015 organized by the Education/Health Productivity research group, RIET Ministry of Economy, Trade and Industry Japan. (3) is also new project beginning in April 2015 as one of the Health, Labor and Welfare Grant-in-Aid for Scientific Research Projects conducted by the National Institute of Population and Social Security Research. (4) and (5) are international joint research works using the latest micro-survey data of CHIP. Finally, (6) are labor policy researches organized by JILPT, I am participating these research works from 2006.

Key words: Chinese economy, economics of transition, labor economics, development economics, income inequality in China, social security system in China, Chinese labor market
