

HIAS
BROWN BAG SEMINAR #15

Is Energy Efficiency Contagious?

Evidence from Peer Effects in Home Retrofits

Thursday

13 March

12:40 PM – 1:40 PM

Presentation

+

Chat over lunch

Bring your lunch
and enjoy an hour of
pure bliss!

Deadline: 12 March, 3 p.m.

Bring your own lunch.
Coffee and snacks will be served.

Register now!

I examine spatial peer effects in Canada's largest home energy efficiency retrofit program and their impact on household energy consumption. Using a decade of house-level data from a Canadian city, I find that neighbors of retrofitted homes reduce their monthly natural gas and electricity consumption by 2.4% and 1%, respectively. Retrofit visibility plays a key role—highly visible upgrades (e.g., windows, doors, exterior insulation) have 3.5 times the impact of less visible ones (e.g., furnace upgrades). Additionally, peer effects weaken with distance from retrofitted homes.

Speaker

Kareman Yassin

The HIAS Brown Bag Seminar is a seminar series hosted by Hitotsubashi Institute for Advanced Study (HIAS). The seminar series aims to promote interaction between HIAS researchers, faculty members, and students university-wide. HIAS, with its 11 research centers, will continue to strive to function as a hub to facilitate active research collaboration throughout the University.
