

Fall 2008  
International Corporate Finance I

## LECTURE 9 Economic Growth and Finance

Tokuo Iwaisako  
HITOTSUBASHI UNIVERSITY

10/13/2008

ICU08\_lecture9: Economic growth and  
Finance

1

## Review from the last week: Pecking order for the firm

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

2

## Choice between bond issue or bank borrowing

10/13/2008

ICU08\_lecture9: Economic growth and Finance

3

## Dynamics of the firm's financing decision

- A firm will go to market when its reputation is established
- Entrepreneurial firm starts with
  - own money
  - bank borrowing; venture capital
  - IPO: becomes a public firm
  - Issue corporate bonds: this is already very large firm

10/13/2008

ICU08\_lecture9: Economic growth and Finance

4

## Empirical evidence on benefits of financial intermediaries: HKS

- Hoshi, Kashyap, and Scharfsetin (1991,QJE), hence HKS.
- Japanese “firm groups” (Keiretsu)
- Very strong long-term relationship with groups’ main banks
- HKS: Analyzed investment behaviors of group firms and non-group firms
- Non-group firms’ investments are more sensitive to current cash flows.

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

5

## Investment equation

- Tobin’s q: MK/BK
  - MK: Market valuation of the firm
  - BK: Accounting value (“book” value) of the firm’s installed capital.
  - When Tobin’s q is higher than one, the firm should invest

$$Investment = \alpha + \beta_1 \cdot Cash + \beta_2 \cdot Tobin's Q + \varepsilon$$

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

6

## HKS's Table II

	Group Firms	Independent Firms
Cash flow	0.041 (0.033)	0.501 (0.084)
Short-term securities	0.061 (0.024)	0.512 (0.085)
Tobin's q	0.007 (0.03)	0.007 (0.004)

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

7

## Implications

- Remember, the firm will prefer retained earnings most, as the source of its investment.
- The second will be either corporate bonds or bank borrowings
- Business group affiliation is mostly fixed. In other words, it is exogenous to firms.
- HKS's finding: Group affiliations (=strong ties with main banks) will stabilize firms' investment activities.

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

8

## Important reservations

- HKS only looked at the “benefits” of firm’s long-term relationship with bank and business group affiliations.
  - HKS themselves stress this point in their paper
- There might be costs.
  - Group affiliation gone bad: Mitsubishi motors
  - Excellent independent firms: Toyota, Honda

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

9

## Economic development and financial development: Japanese experience

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

10

## Economic development

- Production function:  $Y=F(K,L)$ 
  - I: investment
  - K: capital stock
  - Y: output / GDP
  - $I \rightarrow K \rightarrow Y$
- Financial needs for equip investments

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

11

## Economic growth and financial development

- Economic growth will cause financial development too
  - Income growth  $\rightarrow$  saving growth
  - Saving growth induces the development of financial system
- It is not obvious whether:
  - financial development  $\rightarrow$  economic growth
  - Or: economic growth  $\rightarrow$  financial development

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

12

## Financing is difficult at the initial stage of economic development

- Remember our discussions on financial intermediation
  - Without reputation, raising funds in market will be difficult
  - In the country in which economic institutions are established, the dependence to bank financing will be low.

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

13

## Financing countries' "take off"

- Public financial intervention
  - Development bank
    - e.g. Japan development bank, Japan Import-export bank
    - Public financial institutions send "signals"
      - Industrial policy
  - International intervention, ODA
    - World bank: e.g. the bullet train in Japan
    - ADBI, JICA

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

14

## Solving reputation problem by relationship finance

- Long-term relationship with a bank
- Business groups
- Japan up to 1960s
  - Six large business groups (Mitsubishi, Mitsui, Sumitomo, Fuyo,....)
  - Vertical business groups: Toyota, Nissan
- Korea, India

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

15

## Benefits of relationship finance

- Lowers monitoring cost
- Mitigate moral hazard of borrowers
- Reduce adverse selection
- Reduce the costs of financial distress
- Induce efficient resource (re)allocation within the business group
  - Internal capital market

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

16

## Reducing the costs of financial distress

- Restructuring of Toyo Kogyo (Mazda): classic case
  - Around the first oil shock (early 1970s): decline of export and over production
  - Kohei Matsuda was third president from the founding family
- Restructuring led by Sumitomo
  - In 1974, Sumitomo sent two officers
  - Announced new loans: crucial to maintain other creditors' confidence
  - Kohei Matsuda was finally pushed out from management in 1977

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

17

## Costs of relationship finance

- Bank side
  - Empire building motive: Choose size rather than profits
  - Discourage innovation
  - Sometimes have to rescue inefficient firms
- Firms
  - Higher funding costs
  - Too much debt financing
  - Discourage risk-taking

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

18

## Japanese experience

- Meiji revolution
  - Development of business system in *Edo* era
  - Introduction of Western legal system
- War time finance
  - Resolution of *Zaibatsu* (Prewar family conglomerates)
  - Relationship banking (Business groups)

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

19

## Post war Japanese experience

- Government intervention
  - Industrial policy
  - JDB, EXIM
  - Postal saving
  - Fiscal Investment Loan Program
  - Interest rate control
  - MoF controlled market finance

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

20

## Dependence to bank borrowing

Year	Financial Markets			Borrowed Funds		
	Total	Equity	Domestic bonds	Total	Private	Public
1954	21.1 (%)	17.0	4.1	78.9 (%)	70.0	8.9
1960	23.9	19.2	4.7	76.1	68.9	7.2
1965	22.5	17.4	4.9	77.5	70.2	7.3
1970	17.4	12.9	4.3	83.9	76.4	7.4
1975	13.6	9.0	4.4	86.4	78.4	8.0

10/13/2008

ICU08\_lecture9: Economic growth and Finance

21

## 1970s to early 1980s

- Slow down of economic growth and oil shock
  - Less financial needs
  - Budget deficit → development of JGB market
- International firms
  - Stock issues in foreign market: e.g. SONY
- External pressure
  - US demands financial liberalization

10/13/2008

ICU08\_lecture9: Economic growth and Finance

22

## Decline of banking

Year	Financial Markets			Borrowed Funds		
	Total	Equity	Domestic bonds	Total	Private	Public
1975	13.6 (%)	9.0	4.4	86.4 (%)	78.4	8.0
1980	13.3	7.9	4.6	86.7	77.6	9.1
1985	17.0	9.9	5.1	83.0	74.7	8.3
1990	23.5	10.4	6.1	76.5	66.6	9.9
1995	22.2	9.5	8.2	77.8	64.6	13.2

10/13/2008

ICU08\_lecture9: Economic growth and Finance

23

## Public intervention in allocation of credit

- Background
  - Wartime finance: no market financing
  - Resolution of Zaibatsu (large shareholders)
  - Catching up process in economic development → lack of capital
  - So called “industrial policy” by MITI
    - Target industries

10/13/2008

ICU08\_lecture9: Economic growth and Finance

24

## High growth era (50s to early 70s)

- Japan Development Bank
  - Financing of industrial infrastructure:  
Railroads, Highways, Bridges, Major roads
  - Direct financing of target industries:  
“signaling” effect. cf. MITI’S industrial policy
- Japan EXIM
  - Promotion of Japanese exports.
  - Credibility of Japanese firms or financial institutions were low in abroad.

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

25

## Did public intervention work in high growth era?

- Public guidance of investment– mixed answer
  - Yes: MITI, Aoki
  - No: M.Fukao, D.Weinstein
    - Targeted industries or moving target?
    - Direct evidence suggests government guidance is ineffective, especially in rescuing declining industries.
    - Profits of keiretsu firms tend to be lower than independent firms.
- Debate will continue.
- But, some well-known assessments such as *East Asian Miracle* (WB) apparently overemphasize the importance of government intervention in Japanese (and perhaps East Asian) development.

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

26

## From mid 70s: Industrial structural change

- Government attempts to rescue declining industries generally failed.
  - Coal mining
  - Textiles
- Social costs and benefits of slow adjustment process
  - unemployment

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

27

## Current status of public financial institutions (1)

- No active role in “promotion of industries”
  - General importance of FI has declined.
  - Financial innovations. New types of financial institutions such as venture capital.
  - Internationalization of financial market.
  - Public FIs such as DBJ are not very good at picking winning industries.

10/13/2008

ICU08\_lecture9: Economic growth  
and Finance

28

## Current status of public financial institutions (2)

- “Buffering” declining industries.
- Substituting when private banks withdrew funds for their own financial problems.
  - But, is it efficient? Or politically motivated move?
  - Slowing structural change?
- New Move: Restructuring Business
